Well No. 9 Drilling Upcoming Project Information

Description: Construction of new potable water well to provide a source of groundwater for municipal use. The well will be constructed to obtain the greatest possible yield (approximately 1,200 gpm) within the limits of well depth and diameter. The well will be drilled through unconsolidated and consolidated formations using rotary drill methods. Well construction will include a surface seal, grouting, casing, well screen, development, disinfection, pumping tests, and site cleanup.

Information: Project information will be provided closer to the project start date

Dates: This project is planned to start construction in 2026

Hours: Project hours will be provided closer to the project start date

Location: See project area below in red
